

Made in Sweden, powered in Switzerland.

Saab 9-5 Aero and 2.3T Ecopower.

Hirsch Performance offers a complete personalisation program for both their top models in the Saab 9-5 series, the 9-5 Aero with 250 HP and the new 220 HP version 2.3T. Whether you are looking for an increase in the engine performance, aerodynamics, rims, chassis, brakes or interior, at Hirsch Performance – your number 1 for Saab accessories – you can never go wrong.

Increase in Performance

Hirsch Performance offers two kits to increase performance to 280 or 205 HP for the engine variants with 220 HP and 250 HP respectively.

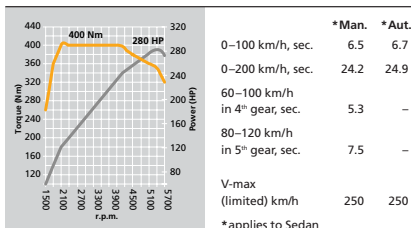

When retrofitting to 280 HP, a greatly enlarged intercooler, a complete air-filter system, a larger inlet manifold and a sport exhaust system in stainless steel from the catalytic converter onwards are installed. The engine breathes better with these parts and releases unexpected resources of power, together with the engine software, which has been adjusted to the new conditions! An exemplary torque level and high performance in all areas provide a driving performance equal to that of a sports car!

The turbocharger and the catalytic converter are exchanged and the fuel pressure increased on the 305 HP variant. 305 HP and 420 Nm torque is the sheer unbelievable result and the converted engine exceeds even the highest expectations!

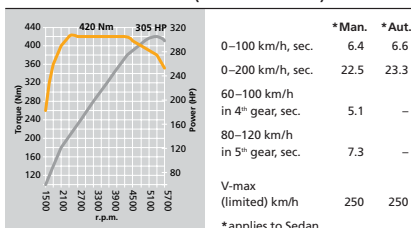

Both versions are also available with automatic transmission!

Saab 9-5 Aero and 2.3T (280 HP/400 Nm)

Saab 9-5 Aero and 2.3T (305 HP/420 Nm)

6-spoke 17-inch and 18-inch rims

Lowered sport chassis

Single or double-pipe sport exhaust systems

4-piston brake systems

Complete range of accessories for the interior

Wheel rims

Hirsch Performance offers 17-inch and 18-inch rims for the Saab 9-5. The classic 6-spoke wheel is manufactured with the low-pressure casting method and a particularly lightweight and robust aluminium alloy.

Sport Chassis

The sport chassis for the Saab 9-5 contains a set of springs and specially tuned shock absorbers. The chassis being lowered by approx. 15 mm (in comparison with the sport chassis ex works), and the selected adjustment of the chassis, your Saab 9-5 clearly gains in driving dynamics without losing any of its comfort!

Exhaust Systems

The sport exhaust system, made in stainless steel, enhances the inner and outer values – for example a lower exhaust back pressure and sportier sound. The pleasant side-effect: a better response when accelerating and an improved final performance! The exhaust systems are also available as single-pipe and double-pipe systems.

Aerodynamics

With Hirsch Performance's aerodynamic kit you kill two birds with one stone: improvement of the aerodynamics due to a lower cw value and a clear reduction in the lift values. At the same time the bullish look of your Saab makes it unmistakable!

Brake systems

The Hirsch Performance 4-piston brake systems have been developed especially for the Saab 9-5 with the help of the specialists from Brembo. The braking power fulfils even the highest expectations and is absolutely suitable for everyday use (only in connection with Hirsch Performance 17-inch or 18-inch rims)!

Interior

Hirsch Performance makes it simple for you to upgrade the interior from the dashboard to the steering wheel or to the aluminium pedals. All parts are manufactured to the highest quality and complement each other.

Please note that owing to different national legislation, some Hirsch Performance products are not homologous in some markets. For more detailed information, please contact Hirsch Performance or your Saab Dealer directly.
